

The Welding Institute Sheffield Branch

Technical Meeting

Monday 27th January 2020

Humber Pipeline Crossing Project

Presented by

Philip Croft

Senior Project Manager, Capital Delivery, National Grid

Building the world's longest tunnelled pipeline river crossing in a quiet corner of Humberside was never going to be easy. The existing pipeline lies in the bed of the river and is at risk of being exposed by the strong tidal currents. National Grid's long term solution involves building a segmental tunnel, 30m under the river and inserting a 4.92km pipeline inside. The presentation will detail the engineering and logistical challenges that are being overcome to deliver this vital project for the security of UK's gas supplies.

Time: A light buffet will be served from 5:30pm. Meeting starts at 6pm.

Venue: TWI Yorkshire, Advanced Manufacturing Park, Catcliffe, Rotherham, S60 5TZ

All welcome- members and non-members.

Please Enrol for the meeting on The Welding Institute Sheffield Branch webpage.
